BURGACH

# Made in Germany

Unique Technology

Lateral opening

Opening speed up to 5 m/s

High safety

Minimum follow-up costs

Internal and external door

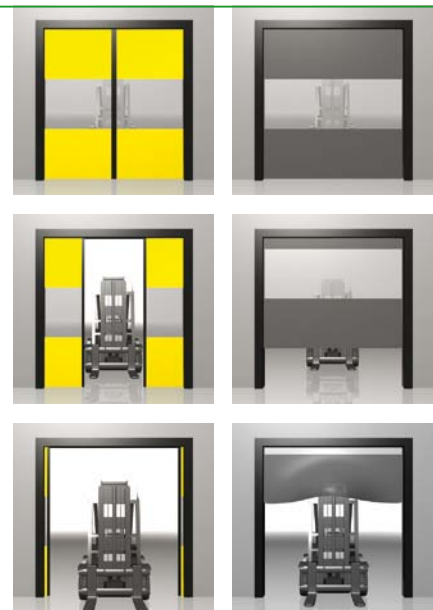

Suitability for escape routes

Installation and Service from a single source

# Lateral opening Opening

With an opening speed of 5 m/s NOVOSPRINT is the world's fastest industrial door.

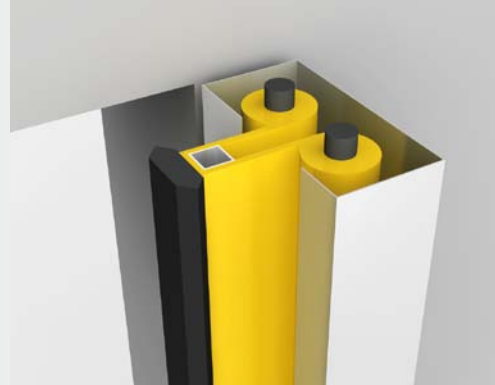

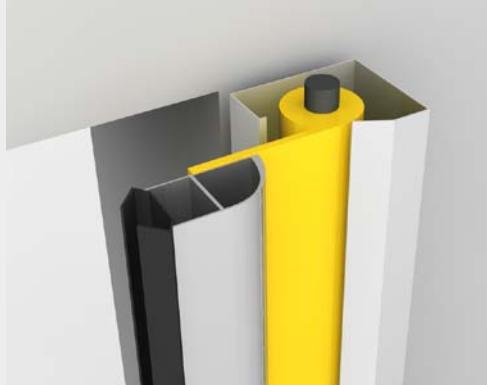

The NOVOSPRINT advantages compared to vertical opening

Opening time is twice as fast due to the lateral opening of the door and unlike to vertically opening doors, the complete opening height is immediately accessible for the user.

An opening speed of up to 5 m/s and closing speed up to 2.5 m/s enables faster and safer transport of goods. A collision with the door is not possible. This trouble-free flow of traffic and goods avoids long interruptions and costly door repairs.

Beside of the cost effective single-walled version, the twin-walled NOVOSPRINT is appropriate if better insulation values and noise reduction are required

As an added safety feature we offer an integrated safety light curtain

In case of power failure the door can be opened quickly by means of emergency operation. The door is suitable for escape routes. Automatic opening is optional.

Transparent vision panels at eye-level maintain intervisibility between one area and the next even when the door is closed.

Short opening and closing cycles reduce draught and heat exchange, thus reducing energy costs and the possibility of illness.

# Customised Solutions

The high-speed door NOVOSPRINT as an external door, with integrated transport rails and with an individual design of the foil.

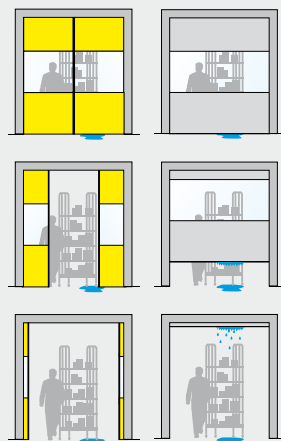

Each NOVOSPRINT, like all Butzbach doors, is manufactured to the millimetre according to your requirements. Special designs, such as cut outs for crane flaps, can always be accommodated.

Due to the self-supporting door construction, the minimal space requirements as well as the problem-free assembly, the NOVOSPRINT is extraordinarily suitable for renovation tasks.

# Special Solutions Solutions

The horizontal opening prevents the closing edge from experiencing contact with the floor.

NOVOSPRINT Hygiene was developed especially for the requirements of the food and pharmaceuticals industries. In compliance with regulations, all tangible parts are made of nonporous and corrosion-resistant material, such as stainless steel and plastics.

The horizontal opening prevents the closing edge from experiencing contact with the floor, ensuring that dirt particles and splash water do not contaminate through traffic.

NOVOSPRINT Mono, the single leaf high speed door, is the ideal solution for narrow corridors or in case of restricted space conditions.

Service

# Quality and All Encompassing Service

We guarantee distinct quality and longevity in our customised door solutions, having had over 30 years of experience in development, designing, manufacturing, assembling and after sales service.

Butzbach employees operate according to the motto: "Everything from a single source".

In providing all the service and support you will need, we can ensure that you will be completely satisfied.

At Butzbach, service starts with consultation. Our focus is on in-depth and constructive dialogue with our customers. Our team of consultants create individual door solutions efficiently, competently and according to your specification and needs. You will be assigned a personal contact who will work with you for the entirety of the project. Your contact knows your individual specifications and can thus, react to changing requirements.

Our installation and service stations are located throughout Germany, so we can guarantee quick and costefficient service. Please contact us to find out about special service and maintenance offers available now.
